

Juice Box Firmware Revision Log

Release Date	Version Number	Revision Description
08/03/2005	System Controller: v1.03 Network Controller: v1.16	<ul style="list-style-type: none"> System Controller – Corrects firmware bug encountered when configuring the IP address. Previously, IP addresses containing a value between 48 and 57 in any of the first three locations returned an “INVALID ENTRY” error. Network Controller – Corrects firmware bug regarding non-volatile storage of Port Description values. When system power is cycled, previously entered Port Description information is reset to default values. Implementing this upgrade corrects this problem. Warning – all previously entered Port Description data will be lost when this update is installed.
07/06/2005	Network Controller: v1.15	<ul style="list-style-type: none"> Added ability to set/modify the Web Page password via the web page interface
